

Sorbothane®

A VISCO ELASTIC POLYMER II

SORBOTHOTICS

A NEW APPROACH TO MANAGEMENT OF THE FOOT

Sorbothane® was formulated to be a mirror image of the calcaneal fat pad in both its contrasting molecular chain lengths, visco elastic properties, and its ability to deform and recover consistently.

The Sorbothotic system of sheets and components, made of Sorbothane®, was designed to be used in conjunction with each other, to fabricate an interim or definitive custom orthosis. It offers the most versatile, clean and effective approach to the management of your patient's foot complications.

The Sorbothotic System consists of:

- Chevron Sheets
- Transverse Arch Sheets
(Metatarsal)
- Longitudinal Arches
- Wedge Sheets

All sheets available in Recovery (light blue) and Regular (dark blue) Grades.

AVAILABLE FROM:

IEM Medical Technologies, Inc.

Distributor of: Sorbothane II
